BAROLO MGA

Vol II

The new book on Barolo and its MGAs is a gold mine, packed with a ton of rarities, unseen material and subjects never treated before.
The production zone and the evolution of its confines from the first decades of 20th century to the DOCG appellation.
The map of the vineyards as they were in 1970.
The last 18 vintages described in detail with their temperatures, rainfalls, and harvest periods.
130 MGA crus mapped and catalogued on the basis of their harvest periods.
The harvest start dates records of some of the most prestigious cellars and the integral text of the essay of Fredinando Vignolo-Lutati on the delimitation of typical wine zones (1929)

**A MUST HAVE BOOK FOR WINE LOVERS
AND PROFESSIONALS!**

Size A4

Hard cover

284 pages + a folder containing:

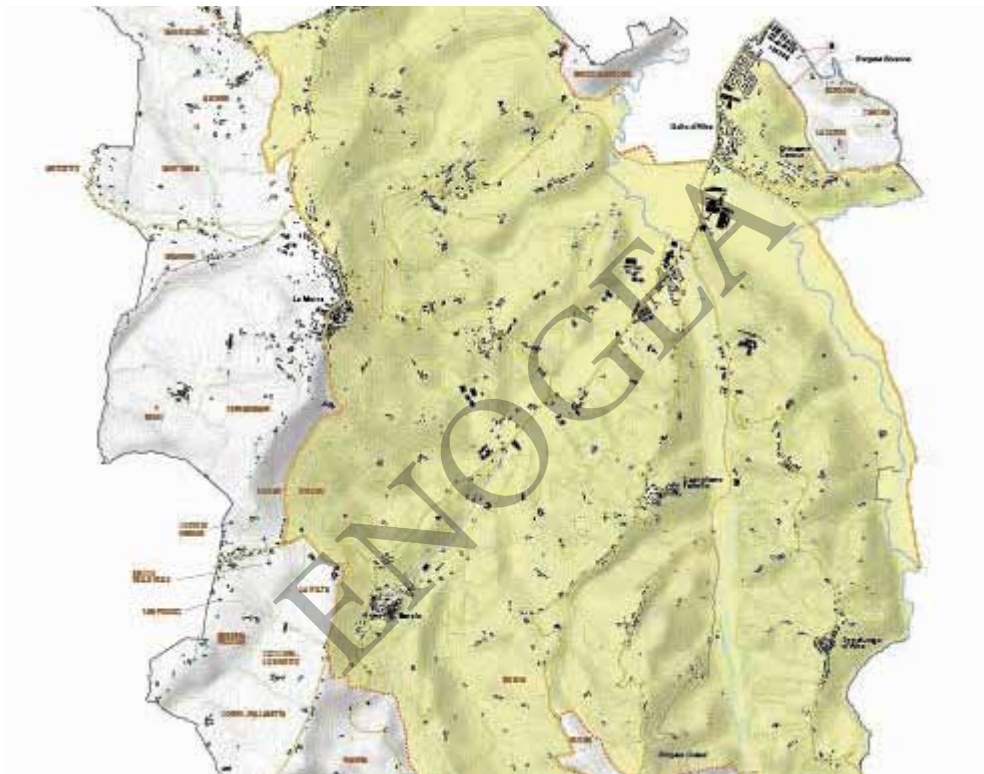

the MGA map (2017)

the MGA map (1970)

the harvest periods map
(size 59x84 cm)

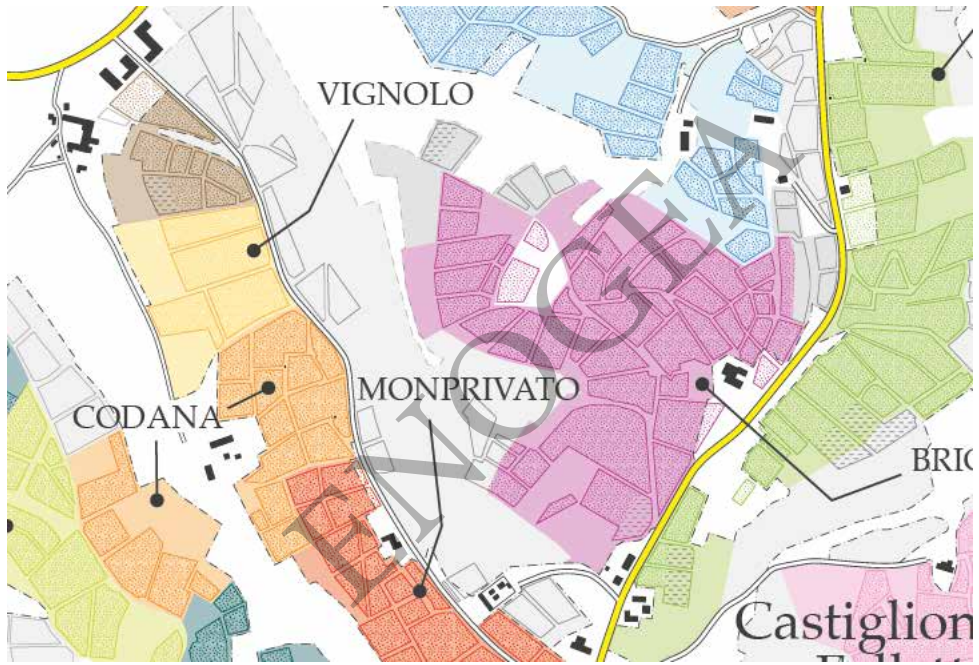

BILINGUAL EDITION: italian / english

On the delimitation of typical wine zones

With viticultural-agrarian and geological maps

Notes of the associate FERDINANDO VIGNOLO-LUTATI

Meeting of November 24th 1929

The problem of the safeguarding and protection of typical wine, which is linked to that of the delimitation of its respective production zones, is frequently brought up, and its solution, in addition to being desirable and necessary, might also appear natural and simple to those who, with little knowledge of the question, consider the matter in a superficial way.

In truth, the task comes up against grave difficulties, one which might be called insuperable to the extent that, up until now, a clear or generally satisfying solution to the problem or even proposals which could be of practical application have not yet been found.

I have been induced to write some considerations of a general nature on the question, one which has always interested me, by a particular case which involves my area: that of the delimitation of the classic Barolo production zone, of distinguishing it from the zone of Nebbiolo production. (It is widely known that the Nebbiolo grape, in addition to wines of the same name, is used in the area around Alba for the production of Barolo and Barbaresco in addition to other quality wines in other parts of Piedmont).

I am not here to recall the history of discussions of the question, something of little interest, I shall merely remind you that consultation for the creation of a Consortium for the defense of Barolo began in 1924 and that in June of 1927 the Gazzetta Ufficiale (the Official Gazette) published the decree and the regulations for typical wines. This law was hailed with exultance by the entire country and particularly here in Piedmont: but when it was
